Your invitation to the
Sir Ewen Waterman Oration & Workshop

Reframing the goal of training in health care:
Trusting to care for the patients of the future

Competency-based medical education has emerged as the dominant approach to training doctors in the 21st century, but has not been easy to implement. The concept of Entrustable Professional Activities, introduced to align teaching and assessing competencies with the daily practice of health care, frames the goal of training as the readiness to be trusted with the responsibility for unsupervised practice in well defined, relevant professional activities. This Oration will focus on the implications of using EPAs in workplace training.

Working with EPAs in workplace-based curricula

This workshop has two objectives:
(a) to familiarise participants with the definition and elaboration of EPAs
(b) to guide educators in redesigning assessment using entrustability of learners.

The workshop will include two short presentations, extending the general framework presented in the Oration, and two hands-on small group practice sections.

Presented by
Professor Olle ten Cate

Olle ten Cate attended medical school at the University of Amsterdam and has been involved in medical education since 1980. His research interests include curriculum development, peer teaching, and competency-based medical education. In 1999, he was appointed Professor of Medical Education at University Medical Centre Utrecht, and Program Director of undergraduate medical education, and has led the Centre for Research and Development of Education since 2005. He has published extensively in medical education and is heavily involved in supervising doctoral students in health professions education research.
